

ABISINAN M

Full Stack Developer · MERN Stack · TypeScript

abisananmadathil0@gmail.com | [+91 80860 01138](tel:+918086001138) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Self-taught Full Stack Developer with hands-on experience building scalable products from scratch and shipping production-grade applications. Experienced in solving real-world problems through backend systems, real-time architectures and full-stack development. Strong ownership mindset, highly adaptable and comfortable learning new technologies quickly. Focused on building reliable software with attention to performance, scalability and edge cases.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript

Frontend: React.js, Next.js, Redux, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend: Node.js, Express.js, REST APIs, Clean Architecture, MVC, Layered Architecture

Databases: MongoDB (NoSQL), SQL

Real-Time: Socket.IO, WebSockets

AI & LLM: RAG (Retrieval-Augmented Generation), Vector Databases, Embeddings, Prompt Engineering, Streaming LLM Responses

Security: JWT Authentication, RBAC, Input Validation, Rate Limiting

DevOps & Cloud: AWS EC2, Nginx, Docker (Basic), CI/CD Pipelines, Vercel, Render

Tools: Git, GitHub, VS Code, Postman, Figma

EXPERIENCE

Software Engineer — MERN Stack — [Brototype](#) 2024 – Present

Industry Training Program · Full-time

- ▶ Completed a **1.5-year intensive** industry-level software engineering program focused on building production-grade full-stack applications with the MERN stack.
- ▶ Designed scalable backend systems using **Clean Architecture**, enforcing strict separation between business logic and infrastructure layers for maintainability.
- ▶ Built real-time systems using **Socket.IO** including live data feeds, notifications, and chat with JWT-based WebSocket authorization.
- ▶ Participated in **weekly technical reviews** and architecture discussions with senior engineers to maintain high code quality and scalable system design.

PROJECTS

three-M — Real-Time Fintech Platform • [Live](#) | [GitHub](#)

Stack: React, Node.js, TypeScript, MongoDB, Socket.IO, AWS EC2, Nginx

- ▶ Built a full-featured stock trading, mutual fund investing, and **algo-trading platform** with real-time market data streaming using Socket.IO.
- ▶ Implemented **portfolio tracking and analytics** dashboards giving users live insights into their holdings, P&L, and performance metrics.

- ▶ Designed secure backend with **Clean Architecture (Hexagonal)** and Dependency Injection in TypeScript, decoupling business logic from infrastructure.
- ▶ Hardened APIs with stateless **JWT authentication, RBAC**, rate limiting, Helmet security headers, and centralized error handling.
- ▶ Deployed on **AWS EC2 with Nginx** reverse proxy, ensuring high availability and production-grade reliability.

readAndGrow — E-Commerce Book Platform • [Live](#) | [GitHub](#)

Stack: *Node.js, Express.js, MongoDB, EJS*

- ▶ Developed a **full-featured book-selling platform** with product listings, cart management, user authentication, and order processing.
- ▶ Implemented **server-side rendering** using EJS templating engine with optimized MongoDB queries for fast page loads.
- ▶ Built an **admin panel** for inventory management, order tracking, and sales analytics.

EDUCATION

Higher Secondary — Computer Science — GHSS Peruvallur2024

Full Stack Development Program (MERN) — Brototype2024 – Present

1.5-year intensive industry-level software engineering program · Currently enrolled
